Jennifer Walker, PhD, MPH

Senior Research Fellow
Deputy Lead in the Cancer Prevention in Primary Care Research Group
Department of General Practice, The University of Melbourne, Australia

“A Novel Colorectal Cancer Risk Prediction Tool (CRISP): From Inception to Implementation, Tales from Down Under”

Thursday, November 9, 2017
4:30 p.m. in the Doll & Hill Room

Australia and New Zealand have the highest rates of colorectal cancer (CRC) worldwide. Despite this, a free national colorectal cancer screening program is under-utilized and there is an overuse of colonoscopic screening in people at average risk of developing CRC. The CRISP study aims to increase risk-stratified CRC screening by developing and implementing a risk prediction tool for use in primary care. Over five years, Dr. Walker’s research group has developed a novel risk tool and tested it for useability, acceptability and feasibility in primary care, and currently an RCT and implementation study are underway. The methods and results of the program of research will be presented at this seminar.

Join us for a reception in the break area after the presentation.

Co-sponsored by the Institute for Public Health, the Department of Obstetrics and Gynecology, the Department of Medicine, and the Department of Anesthesiology
