This eight-week program is open to current full-time undergraduate students; graduate students pursuing an MPH, MSW, or other related master’s degree program; and medical students looking to gain experience in the field of public and global health research (especially infectious diseases and pediatrics).

Eligibility limited to U.S. and international students enrolled at the time of participation in the program, or matriculating in fall 2019, at a U.S.–based university/college.

This program will expose students and future investigators to research in a lab or field-based setting and further their interest in public health or global health. This program includes mandatory didactic sessions and seminars, and is an opportunity to establish a career-building network. Participants are expected to pursue their research training full time, defined as 40 hours per week, and attend all program events (if based in St. Louis). At the end of the eight weeks, the students will present at a student research symposium.

**PROGRAM BENEFITS**

• Work in real world public health practice and research environments, including some international sites
• Gain exposure to top investigators and diverse research topics
• Receive individualized career counseling and develop career interests
• Build a social network with student peers and faculty
• Receive a $4,000 stipend and a free Metrolink transit pass for non-WashU students
• For students working at an international site, travel to and from St. Louis to the research site

**TIMELINE**

Applications accepted: November 1, 2018 – February 1, 2019
Program runs: June 3 – July 31, 2019
